

WEBSITE TRAFFIC ANALYSIS REPORT

Student Name : BANAVATH SRIKANTH NAIK
Internship : Alfido Tech
Project Title : Website Traffic Analysis
Dataset Used : traffic.csv
Tool Used : Python (Jupyter Notebook)

Executive Summary

This project focused on analyzing website traffic data to understand user activity, engagement trends and visitor behavior.

The analysis was performed using Python and Jupyter Notebook. Data cleaning and exploratory analysis were completed to prepare the dataset for meaningful insights.

Visualizations were created to identify traffic trends, country-level engagement and user interaction patterns.

The findings and recommendations provide useful business insights to improve engagement and optimize performance.

1. Project Objective

The objective of this project is to:

- Analyze website traffic patterns
 - Understand user engagement
 - Identify visitor trends
 - Generate business recommendations
-

2. Dataset Overview

Dataset Name:

traffic.csv

Dataset Includes:

- Traffic events
- Date information
- Country details
- Artist engagement
- User interaction records

Total records and attributes were analyzed using Python.

3. Data Cleaning

Data preparation included:

- Missing value identification

- Removal of incomplete records
- Dataset validation

Outcome:

Clean dataset prepared for analysis.

4. Analysis Performed

The following analyses were completed:

Traffic Event Analysis

Measured event distribution.

Country Analysis

Identified regions with stronger engagement.

Content Analysis

Compared performance across content categories.

Trend Analysis

Observed traffic changes over time.

5. Visualizations Included

1. Traffic Event Distribution
2. Top Countries Analysis
3. Top Engagement Categories
4. Daily Traffic Trend

These visualizations helped understand user behavior.

6. Key Findings

1. Traffic activity was concentrated in selected events.
 2. User engagement varied across regions.
 3. Traffic patterns changed over time.
 4. Certain content generated higher interaction.
 5. Data insights support decision making.
-

7. Recommendations

Recommendation 1

Improve pages receiving higher engagement.

Recommendation 2

Increase optimization for low-performing content.

Recommendation 3

Create region-based engagement campaigns.

Recommendation 4

Monitor trends regularly.

Recommendation 5

Use analytics dashboards for performance tracking.

8. Conclusion

Website traffic analysis provided insights into visitor activity and engagement behavior.

The project demonstrated how data analysis and visualization can support better business decisions.

The recommendations can help improve engagement and overall website performance.

Deliverables

✓ Jupyter Notebook

✓ Visualizations

✓ PDF Report
