

SALES PERFORMANCE ANALYSIS REPORT

Student Name : BANAVATH SRIKANTH NAIK
Internship : Alfido Tech
Project Title : Sales Performance Analysis
Dataset Used : sales_dataset(1).csv
Tool Used : Python (Jupyter Notebook)

Executive Summary

This project focused on analyzing sales performance across regions, product categories and time to understand business trends and identify opportunities for improvement.

The analysis was conducted using Python and Jupyter Notebook. Data cleaning, KPI calculation and sales trend analysis were performed to evaluate business performance.

Visualizations were created to compare regional sales, category contribution and monthly trends. Product-level analysis was also completed to identify best and worst performing products.

The findings and recommendations aim to support better sales decisions and improve business growth.

1. Project Objective

The objective of this project is to:

- Analyze sales performance across regions
 - Evaluate category-wise sales contribution
 - Understand time-based sales trends
 - Identify top and low-performing products
 - Generate recommendations for business improvement
-

2. Dataset Overview

Dataset Name:

sales_dataset(1).csv

Dataset Includes:

- Order information
- Product details
- Regional sales data
- Revenue and profit information
- Order dates and customer details

The dataset was prepared and analyzed using Python.

3. Data Cleaning

Data preparation steps completed:

- Checked missing values
- Removed incomplete records
- Removed duplicate rows
- Validated cleaned data

Outcome:

The dataset was cleaned and prepared for accurate analysis.

4. KPI Analysis

The following Key Performance Indicators were calculated:

Total Revenue

Measured overall sales generated.

Profit Margin

Calculated profitability percentage.

Average Order Value

Measured average sales value per order.

Total Orders

Calculated order volume.

These KPIs helped evaluate overall business performance.

5. Analysis Performed

Regional Performance Analysis

Compared sales across different regions.

Category Performance Analysis

Measured contribution of product categories.

Product Performance Analysis

Identified top and low-performing products.

Seasonality Analysis

Observed monthly sales patterns.

6. Visualizations Included

1. Monthly Sales Trend
2. Category Performance
3. Regional Performance
4. Product Analysis

These visualizations supported understanding of sales behavior.

7. Key Findings

1. Sales performance differs across regions.
2. Product categories contribute unevenly to revenue.
3. Monthly sales trends indicate seasonality.
4. A limited number of products generate major revenue.
5. Certain products require improvement strategies.

8. Tactical Improvements for Alfido Tech

Recommendation 1

Increase marketing efforts in high-performing regions.

Recommendation 2

Improve visibility for low-performing products.

Recommendation 3

Launch seasonal sales campaigns.

Recommendation 4

Strengthen inventory planning using sales trends.

Recommendation 5

Track KPIs regularly for decision making.

9. Conclusion

Sales Performance Analysis provided insights into revenue patterns, product performance and regional sales behavior.

The analysis demonstrated how data-driven decisions can improve sales growth and optimize business performance.

The recommendations can support stronger engagement and business outcomes.
